If a moisture sample is to be obtained, go to moisture sampling instructions and perform the test before continuing with this air sampling instruction. Start the compressor and allow it to run with air flowing from the sampling point for at least 5 minutes before sampling. While the compressor is running, complete steps 2 and 3 of these instructions.

Record the orifice plate size on the data sheet under "Oil Mist/Particulate Sample Data." To install or check the size of the installed orifice plate, unscrew the multi-holed noise muffler. The orifice plate is the aluminum disk with a hole in it. The size is imprinted on it.

Assemble the sampling equipment as follows: Screw the input fitting into the short half of the PVC filter holder. Place one filter assembly into the other half of the PVC filter holder (white filter pad facing out, see picture). Assemble the two halves of the PVC filter holder. Make sure all equipment is securely tightened.

DO NOT INSERT A SAMPLING BOTTLE YET.
Connect the complete unit to your air source. Open the charging lead or air source valve SLOWLY and allow the pressure on the flow section gauge to stabilize in the 9-12 psi range. Run the sample according to the time specified in the table in step 3. Complete step 6 during this run time. If you are unable to obtain 9-12 psi change the size of the orifice plate. Remember to record the size used during testing.

As step 5 is running, choose a sample bottle and record the bottle number on the data sheet under “Breathing Air Sample”. Remove the black shipping cap and replace it with the white sampling cap. Insert the bottle into the fitting containing the needles just above the pressure gauge, by pressing straight down onto the needles. DO NOT TWIST the bottle, the needles will be damaged.

The air sample bottle must run at least one (1) minute. The air sample will be taken during a portion of the time step 5 is running. Be sure to check that the white Teflon float inside the sample bottle has risen away from the needled fitting. (If the float does not rise and stays by the needles there may be a clog in the needled fitting.) Call TRI at (512) 263-0498 if you have any problems.

While the air is still flowing, remove the sample bottle (DO NOT TWIST) and replace the white sampling cap with the black shipping cap. The sample must be returned with the black cap tightly in place or the sample will not be analyzed.

While you are sampling, be aware of any pronounced odor coming from the noise muffler of the flow section. Record your observation on your data sheet under “Pronounced Odor”.

You have just completed the basic sampling procedure. If you are not doing any additional sampling, turn off the charging lead or air source valve, turn off your compressor and disassemble the sampling equipment. Return each part to your kit. Make sure the sample bottles are capped with the black shipping caps. (If white caps are left on the sample bottles, the samples will not be analyzed.) Place the filter into the red case. Check that the data sheets have been correctly and completely filled out. Return to TRI for analysis. If you are using a return shipping tag place it on the package and call FedEx (800) 238-5355 or UPS (800) 742-5877 to request a pick-up or use their drop boxes.

If for any reason you damage a filter or break a bottle, please return this media to TRI for a replacement. This will help us keep your inventory current.

AT THE LAB
TRI Air Testing, Inc.’s laboratory will perform analysis within one (1) business day of receipt of the sample. If the sample does not pass the specification you request, you will be notified within one (1) business day. TRI will put the analyses results into a report and immediately upload it to your online account. Visit our website to activate your online account. www.airtesting.com “My Air” login.

Upon request, TRI will also supply your facility with a certificate of analyses for the samples that met the requested specifications.

If for some reason you need to have your results sooner, call to let us know at (512) 263-0498 or indicate this on the “Rush Analysis” section of the data sheet. Purchase order or credit card is required for additional charges.
Should you have any other questions or concerns, feel free to call us at (512) 263-0498.
